Year	2015-16
Topic	Faculty development programme on outcome based education
No. Of participants	08
Date	3-12-2015 to 05-12-2015
Abstract	Teaching Effectiveness can be brought about by understanding the models of instruction that captures, delineate and transfer the knowledge from a faculty to the learners. These involve a deep understanding of subject matter, learning theory, student differences, planning, and classroom instructional strategies, assessment of understanding of students and analysis of learning outcomes. Effectiveness in teaching also includes ability of teachers to reflect, collaborate with colleagues and continue ongoing professional development. It is facilitated by the interactions between the instructor's knowledge of the subject-matter and ability to develop and use best methods within teaching pedagogy.

Year	2016-2017
Topic	Faculty Development Program on "Teaching and Research Methods"
No. Of participants	20
Date	22-05-2016 to 27-05-2016
Abstract	<p>To complement traditional learning activities in a masters-level research methodology course, social work students worked on a formal research project which involved: designing the study, constructing measures, selecting a sampling strategy, collecting data, reducing and analyzing data, and finally interpreting and communicating the results. The final product was accepted in a respected, peer-reviewed journal. In the hopes of motivating social work educators to use active learning strategies when teaching research methods and to provide some pragmatic advice on how to do so, this article presents students' perceptions of involvement and lessons learned by the instructor. Through open- and closed-ended questions, students reported that involvement was meaningful, promoted understanding of research, strengthened relations among students, and made learning more exciting. Additionally, 41% of students reported that work on the project increased their interest in pursuing doctoral level work. Students also reported that engagement was time-consuming, stressful, and occasionally frustrating. Pragmatic suggestions about how to incorporate a formal research project with teaching are given based on experiences of the students and instructor.</p>

Year	2016-2017
Topic	Faculty Development Program on "Hadoop and Bigdata analysis"
No. Of participants	35
Date	14-11-2016 to 19-11-2016
Abstract	<p>Big Data represents a new era in data exploration and utilization, and IBM is uniquely positioned to help clients navigate this transformation. This book reveals how IBM is leveraging open source Big Data technology, infused with IBM technologies, to deliver a robust, secure, highly available, enterprise-class Big Data platform. The three defining characteristics of Big Data--volume, variety, and velocity--are discussed. You'll get a primer on Hadoop and how IBM is hardening it for the enterprise, and learn when to leverage IBM InfoSphere Big Insights (Big Data at rest) and IBM InfoSphere Streams (Big Data in motion) technologies. Industry use cases are also included in this practical guide. Learn how IBM hardens Hadoop for enterprise-class scalability and reliability. Gain insight into IBM's unique in-motion and at-rest Big Data analytics platform. Learn tips and tricks for Big Data use cases and solutions. Get a quick Hadoop primer.</p>

Topic	Engineering drawing using AUTOCAD
No. Of participants	25
Date	2-5-2017 to 07-05-2017
Abstract	The resource persons delivered concepts of AutoCAD and its application to Engineering Graphics. The participants applied the knowledge to draw projection of lines, solids, orthographic projections and isometric projections using AutoCAD. Fundamentals of engineering drawing are essential in visualizing, developing and drawing the objects without any difficulty. The faculty members were exposed to the basics of Engineering Drawing using AutoCAD with hands-on practice and interactive sessions.

Year	2015-2016
Topic	Faculty Development Programme on "Latest Devices And Network Technologies"
No. Of participants	30
Date	06-06-2015 to 08-06-2015
Abstract	<p>At the beginning of every new year, technology analysts and pundits love to speculate about the new advances the next twelve months might bring. Countless organizations publish their forecasts of what will happen in the technology industry. At Network Computing, we've combed through a lot of the expert opinions and generated our own list of trends that will be important this year to people involved in IT infrastructure. Some of these trends --like the Internet of Things and cloud computing - - are household words in tech. In fact, these are so ubiquitous they even have their own topic sections on our website. Still, they merit close attention, since both are poised to achieve new levels of mainstream prominence this year. Other technologies on our list, like blockchain and containerization, are fairly young. Both are worth watching because they look likely to skyrocket in importance in the coming years. This list also highlights development trends, like microservices architecture and machine learning, and end-user computing trends, like wearables and virtual reality. In these cases, IT needs to make sure that it has the appropriate infrastructure in place to support the rapidly developing technology. No one knows for sure which technologies will be most important for IT professionals in 2016, but the 10 that follow are well worth watching.</p>

Year	2012-2013
Topic	Faculty Development Program on "Computer Organization"
No. Of participants	20
Date	02-01-12 to 07-01-12
Abstract	<p>Computers have become essential business tools. They are used in every aspect of a company's operations, including product creation, marketing and administration. It is critical that business owners take the time to choose the right computers, software and peripherals for their organization.</p> <p>Here are some examples of the education and research we carry out:</p> <ul style="list-style-type: none"> Information processing technology ranging from basic technology, which supports the infrastructure for our computer-based advanced information society and intellectual society, to applied technology such as software containing algorithms and computational theories Building advanced computer types, such as computers containing parallel processing and embedded computer Data science, analyzing big data using deep learning Internet application technology using the web or cellphones Multimedia information processing and interface technology for texts, audio, image, etc. Intelligent, interactive, and ubiquitous sensing technology aimed at symbiosis of humans and robots - investigation of perception and cognitive mechanisms of humans and their application to communication technology

Year	2012-2013
Topic	Advanced Power Converters for Renewable Energy Systems
No. Of participants	25
Date	02-01-2012 to 07-01-2012
Abstract	<p>Power converters for renewable energy systems include large-scale physical systems, engineered multi-agent systems, as well as their interconnection in physical systems. Representative examples are electric power grids. The challenges associated with these systems arise due to their coupled, distributed, and large-scale nature, and due to limited sensing and control capabilities.</p> <p>This Workshop covers modelling, analysis, and design of power converters as well as applications in various engineering domains</p>

Year	2013-14
Topic	Guidance and counselling with reference to engineering college
No. Of participants	15
Date	10-6-2013 to 12-6-2013
Abstract	<p>In order to resolve day to day academic problems of the students, mentors are appointed for a batch of 20 students, and they will counsel the respective students once in a week, to solve the problems come across during their course of study. This is a continuous process till the end of academic career of the student. During the last semester of study students are advised for higher studies along with proper career guidance. Reasonable numbers of students have secured admissions for their higher studies and they in turn guide their juniors for their prospective admissions.</p>

Year	2014-2015
Topic	A Two day National level Workshop on "Industrial Automation -PLC& SCADA"
No. Of participants	25
Date	05-05-2015 to 06-05-2015
Abstract	<p>The main objective of this workshop is to make the aspiring engineers acquainted with the conceptual as well as practical knowledge of the Industrial Automation & latest technologies being used to achieve industrial automation. The idea of organizing this workshop is to inculcate the basic fundamentals of automation in the students and provide them with a platform to work on, In The Near Future.</p> <p>The Most Used Guiding Force Behind An Automated Industrial Plant Is A "Programmable Logic Controller" Generally Known As A PLC. PLCs Along With Certain Other Necessary Ingredients Like Sensors, Motors, Actuators, Valves, Conveyors, Boilers, SCADA Systems, Computers & Many More, Makes A Real Automated Manufacturing Plant.</p>
